

CONTROL VERTICAL

SUPPLIER INFORMATION

All suppliers identified in the CONTROL VERTICAL supplier database are considered suitable by historical criteria, based on product/service quality, response time, rates, as well as environmental and safety performance at work (where relevant).

The re-evaluation of each of our suppliers is completed on an annual basis, in the first three months of the year, following the same guidelines as well as any detected incidents.

If no incidences are reported along the year, the supplier will be considered as approved and recommended.
